

## DOOR SWITCH / SECURITY SENSORS

The security sensor is a magnetic on / off switch, which closes when one half of the sensor is in close proximity to its mate. It is designed to be mounted on doors or windows. When the two sensor pairs are moved apart from each other they open. The base unit senses this closure and opening, and reports the condition.

This sensor works with all SensorHawk base units (*SensorHawk-2*, *SensorHawk-8* and *SensorHawk8/20*) as well as the *SecurityHawk* base units. SNMP traps and sensor polling available (*MIB file supplied*).

PART# SH-SS-15

### Specifications

- **Measurement Range:** Alarm or Normal
  - **Available Lengths:** 4.5m (15 feet) / 18.3m (60 feet) / 30.5m (100 feet)
  - **Sensor Type:** Open / Closed Contact Switch
  - **Sampling Rate:** Multiple Readings per Second
  - **Communications Cable:** RJ45 jack to sensor using UTP Cat 5 wire
  - **Disconnect Alarm:** Relay alert if sensor becomes interrupted or disconnected.
-
